

## Economic Overview

GDP Forecast	Consumption Forecast	Investment Forecast	Government Forecast
2.2	3.0	-5.6	2.0

This is a sample economic report built using Quarto and R. The R code chunks could be substituted with Python code chunks. LaTeX syntax can be used for custom formatting, like the blue headers and footers for example. Quarto has many native features that make report automation and customization easy.

Code Chunk Example:

```
library(ecolytics)
gdp_data %>%
  filter(date >=data_start) %>%
  arrange('date')
```
